Grand Prix Ecosystem Operations Platform

Week 4 : UX Evaluation and Recommended Refinements

Role: UX Designer | Team: 26

1. Overview

The final UX evaluation focused on identifying usability issues within the Grand Prix vendor form prototype, particularly file uploads, field instructions and the review process.

2. Identified UX Issues

Issue	Description	Priority
Missing Image Preview	Uploaded images are not displayed on the review page, preventing users from verifying their attachments.	Medium
Lack of Upload Feedback	The upload field does not visually change after selecting a file, making it unclear whether the attachment was successfully selected.	High
Unclear EMAC Instructions	Helper text repeats the field labels without explaining what EMAC means or where to find the required information.	Medium

3. Recommended Improvements

Display uploaded images or attachment details on the review page.

Provide visual confirmation after file selection, such as a checkmark or filename.

Improve EMAC field descriptions by explaining the terminology and providing clearer instructions.

4. Conclusion

The evaluation identified three usability issues affecting clarity, feedback and attachment verification. The recommended improvements aim to reduce user confusion, improve submission accuracy and provide a more user-friendly experience for vendors..
